

ALICE

ELECTROMECHANICAL
OLIVE HARVESTER

After years of trial and development, Campagnola have coupled the most efficient, hand-held methods of displacing olives with the finest and most reliable materials available to bring you the Alice. Using dual combs with varying finger combinations to suit a broad range of varieties. The Alice works by moving each comb in an precise wave motion, giving each individual finger it's own range of movement. At 250mm, the thermoplastic fingers will dislodge the most reluctant olives.

ELEKTRA

ELECTROMECHANICAL
OLIVE HARVESTER

With the world wide success of the Olistar line of pneumatic harvesters, Campagnola began development on the electric equivalent, the Elektra. Using the simple yet, tried and tested method of clapping, the Elektra takes the incredible harvesting efficiency of the Olistar to a new level. The 210mm fingers are of the same design and made from the same thermoplastic material as the new Olistar Diablo.
